AMENDMENTS TO THE CLAIMS

Please enter the flowing claim amendments:

1. (Currently amended) A process for allocating a resource by a service provider having a plurality of service level agreements with a plurality of customers in a shared computing environment, the process comprising:

classifying a plurality of customers into a plurality of premium customers and a plurality of standard customers where a premium customer is entitled to a first compensation rate when there is a breach of a premium customer's service level agreement, where a standard customer is entitled to a second compensation rate when there is a breach of the standard customer's service level agreement, and where the second compensation rate is less than the first compensation rate;

responsive to a profiling tool indicating that the premium customer's available resource cannot provide an agreed service level resulting in a breach of the premium customer's service level agreement;

determining if the resource has been allocated to ~~an any~~ a customer that is not using the resource;

responsive to determining that the resource has not been allocated to the ~~any~~ customer that is not using the resource, determining if the resource has been allocated to a standard customer; and

responsive to determining that the resource has been allocated to the standard customer, re-allocating the resource from the standard customer to the premium customer;

~~so that the service provider minimizes a compensation to be paid to the premium customer~~

determining the minimum total rebate payable by the service provider for the breach;
wherein the profiling tool collects a plurality of performance data by tracking and
timing a plurality of transactions within the shared computing environment; and
wherein a decision to re-allocate the resource from the standard customer to the
premium customer is based on the plurality of performance data, a plurality of
customer information, a target list of standard customers, the status of the
standard customer, and the status of the premium customer.

2. (Currently amended) A data processing machine for allocating a resource by a service provider to a premium customer in a shared computing environment, the machine comprising:

a processor;

a memory;

a service level agreement stored in the memory, the service level agreement setting a threshold performance level for the resource and a penalty for failing to meet the threshold performance level;

means for causing the processor to measure a performance level of the resource; and

means for causing the processor to compare the performance level of the resource with the threshold performance level; and

responsive to determining that the performance level does not meet the threshold performance level, means for determining if the resource has been allocated to ~~an any~~ a customer that is not using the resource,

responsive to determining that the resource has not been allocated to the ~~any~~ customer that is not using the resource, determining if the resource has been allocated to a standard customer, and

responsive to determining that the resource has been allocated to a standard customer, re-allocating the resource from the standard customer to the premium customer;

determining the minimum total rebate payable by the service provider for the breach; and

wherein a decision to re-allocate the resource from the standard customer to the premium customer is based on the plurality of performance data, a plurality of customer information, a target list of standard customers, the status of the standard customer, and the status of the premium customer.

3. (Currently Amended) A program, encoded in a computer-readable medium, for allocating a resource to a premium customer by a service provider in a shared computing environment, the program comprising:

means for determining if a utilization of the resource has caused a breach of a service level agreement with the premium customer;

means for determining if the resource has not been allocated to an any customer that is not using the resource;

responsive to determining that the resource has not been allocated to the any customer that is not using the resource, means for determining if the resource has been allocated to a standard customer where a standard customer has a standard customer penalty for a breach of a standard customer's service level agreement; and

responsive to determining that the resource has been allocated to a standard customer, means for re-allocating the resource from the standard customer to the premium customer, ~~so that the service provider minimizes a premium customer penalty for a breach of the premium customer's service level agreement;~~

determining the minimum total rebate payable by the service provider for the breach;

and

wherein a decision to re-allocate the resource from the standard customer to the premium customer is based on the plurality of performance data, a plurality of customer information, a target list of standard customers, the status of the standard customer, and the status of the premium customer.
